MS-CIT

PROJECTS

1) Courier Management System Software: using vb.net:-

People when transfer their products using any courier service wants to know whether their product has been shifted to their right place or not, if not then by what time it will be shifted and where it is now. Taking all this Information annually is very difficult and time taking process. To handle all these activities include various processes and paper work from the management side also this Courier Management System Project is developed.

2) Food Traceability:- Android Studio:-

The system i.e. Food Traceability System Supporting to farmer Activity for selling the food products such as vegetables, fruits or grain etc. First the Farmer will register through an android device, enter his/her details to the application and enter crop details like image quantity price. Then system can notify the registered user show the image and crop details. User/Hotels/restaurant can buy the product with the accepted price and send to the farmer. Farmer view the notification and accept the request. If the restaurant have the extra food then send to the NGO notification with the adding food details.
